What are ACEs?

Adverse Childhood Experiences (ACEs) are serious childhood traumas that can result in toxic stress, causing harm to a child’s brain. This toxic stress may make it difficult to learn, to play in a healthy way with other children, and can result in long-term health problems.

THE CENTERS FOR DISEASE CONTROL AND PREVENTION (CDC) VIEWS ACES AS ONE OF THE MAJOR HEALTH ISSUES IN THE 21ST CENTURY.

ACEs can include:

- Emotional abuse
- Physical abuse
- Sexual abuse
- Emotional neglect
- Physical neglect
- Mother treated violently
- Household substance use
- Household mental illness
- Parental separation or divorce
- Incarcerated household member
- Bullying (by another child or adult)
- Witnessing violence outside the home
- Witnessing a brother or sister being abused
- Racism, sexism or any other form of discrimination
- Experiencing homelessness
- Natural disasters and war

Exposure to ACEs can increase the risk of:

- Adolescent pregnancy
- Alcohol and drug abuse
- Asthma
- Depression
- Heart disease
- Intimate partner violence
- Liver disease
- Sexually-transmitted disease
- Smoking
- Suicide

Survival Mode Response

Increased heart rate, blood pressure, breathing and muscle tension. When a child is in survival mode, self-protection is their priority.
The good news is RESILIENCE can bring back health and hope!

What is Resilience?
Resilience is the ability to be healthy and hopeful despite experiencing stressful events. Research shows that when caregivers provide physically and emotionally safe environments for children and teach them how to be resilient, the negative effects of ACEs can be reduced.

Resilience Trumps ACEs!
Parents, teachers and caregivers can help children by:

- Gaining an understanding of ACEs
- Helping children identify feelings and manage emotions
- Creating safe physical and emotional environments at home, in school and in neighborhoods

What Does Resilience Look Like?

1. Having resilient caregivers
   Caregivers who know how to solve problems, who have healthy relationships with other adults, and who build healthy relationships with the children in their care.

2. Building attachment and nurturing relationships
   Adults who listen and respond patiently to a child in a supportive way, and pay attention to a child’s physical and emotional needs.

3. Building social connections
   Having family, friends and/or neighbors who support, help and listen to children.

4. Meeting basic needs
   Providing children with safe housing, nutritious food, appropriate clothing, and access to health care and good education.

5. Learning about parenting and how children grow
   Understanding how parents and caregivers can help children grow in a healthy way, and what to expect from children as they grow.

6. Building social and emotional skills
   Helping children interact in a healthy way with others, manage their emotions and communicate their feelings and needs.
